

Join Challenges

1

First Challenge

Challenge:

Write a query to return the following attributes for employees who belong to a department:

- employee_id
- first_name
- last_name
- salary
- department_name

2

Second Challenge

Challenge:

Write a query to return the following attributes for all employees, including employees who do not belong to a department:

- employee_id
- first_name
- last_name
- salary
- department_name

3

Third Challenge

Challenge:

Write a query to return the total number of employees in each department. Include the department_name in the query result. Also, include employees who have not been assigned to a department.
